With experience gained in credit analysis, macroeconomic analysis, and research, I have built vintage curves and CreditMetrics models, developed a portfolio quality scorecard to formulate an investment thesis for selling it, modeled 2026 electoral scenarios and public policy impacts on the domestic economy, and researched the relationship between financial inclusion and economic activity, respectively. Therefore, I seek to continue this analytical work at institutions that need to transform raw data into investment decisions.

EXPERIENCE

FlyRank AI

Artificial Intelligence and Machine Learning Researcher | July 2026 – Present

- Application of Machine Learning to financial modeling and quantitative finance

UFMG Finance Club

Director of Events | July 2026 – Present

- Responsible for the Reading Committee, Events, and training in PM/Quant.;
